

## Assignment 3 : Introduction to Bootstrap

In this assignment you will add a second page, [aboutus.html](#), to your website.

[Download](#), and move the [aboutus.html](#) to the [leChocolat](#) folder

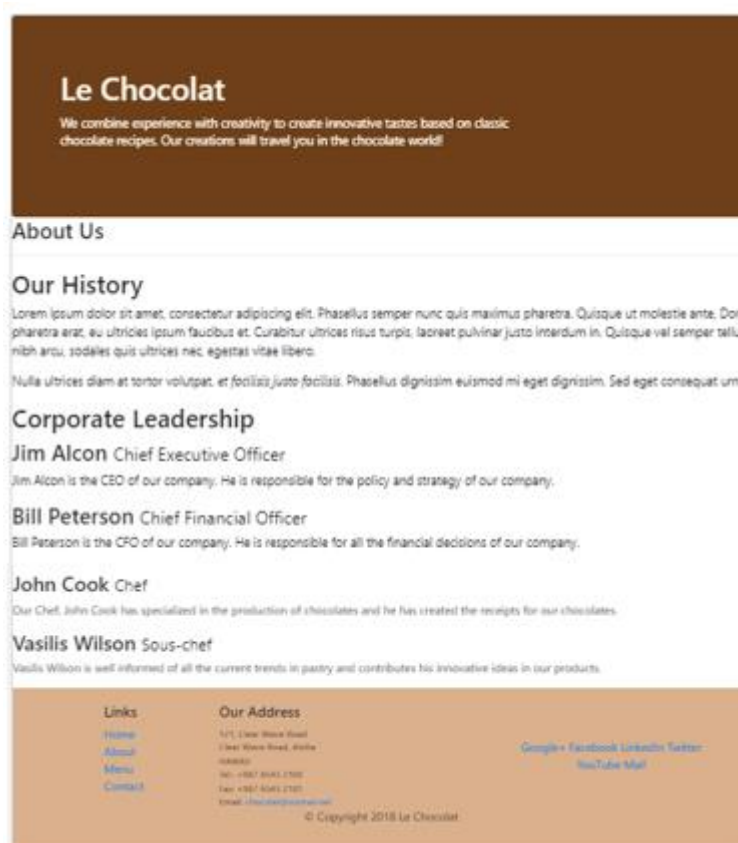

Do a Git commit with the message "**Bootstrap Assignment 1 initial setup**"

### Task 1:

In this task you will be updating the [aboutus.html](#) page to make use of the Bootstrap classes and components:

1. Update the page to make use of the Bootstrap CSS classes.
2. Update the page to also use your custom styles defined in your [styles.css](#) file, and
3. Update the page to make use of all the Bootstrap [JS](#) components.

Run your server and see in your [Chrome](#) the [aboutus.html](#) file in the address <http://localhost:3000/aboutus.html>. Right-click [Inspect](#). In the iPad view you can see the result:

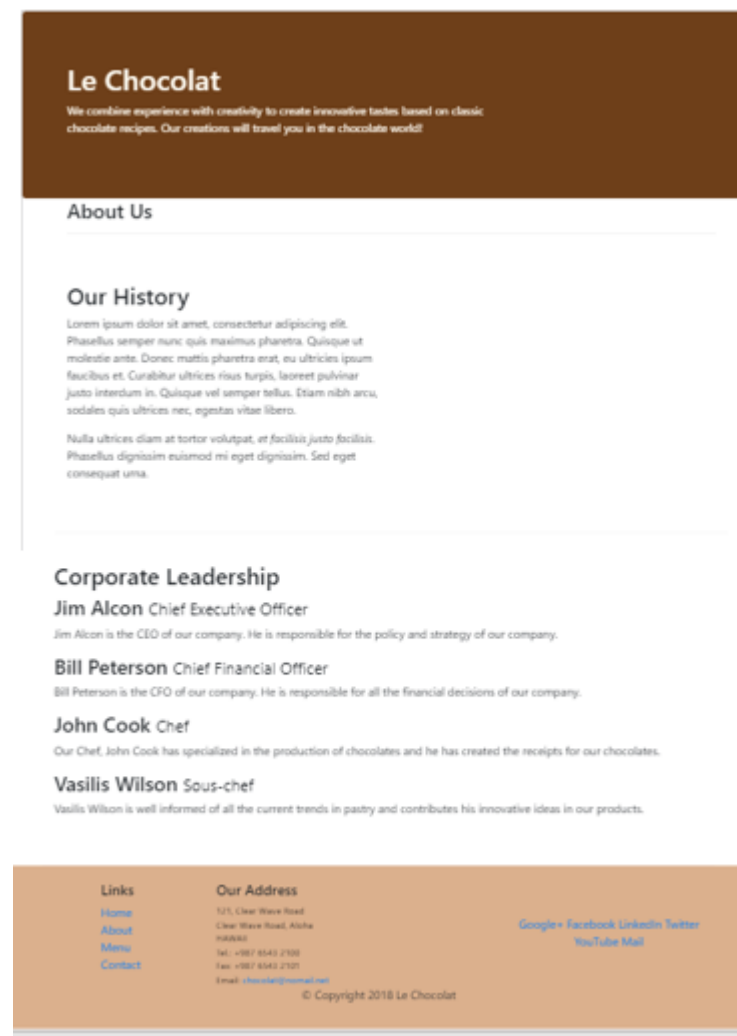

Do a Git commit with the message "**Bootstrap Assignment 1 Task 1**"

## Task 2

In this task you will be adding appropriate formatting to the web page contents using container, row and column classes using the Bootstrap grid so that the web page is formatted to look like the figure given below.

1. The "**About Us**" title should stretch the entire width of the row.
2. The "**Our History**" part should occupy only half the width of the row for small to extra large screens, leaving space on the right side for more content to be added later. The content should be stacked for extra small screens.
3. The "**Corporate Leadership**" section should stretch the entire width of the row.

In the **ipad** view of your **Chrome** you can see the result:

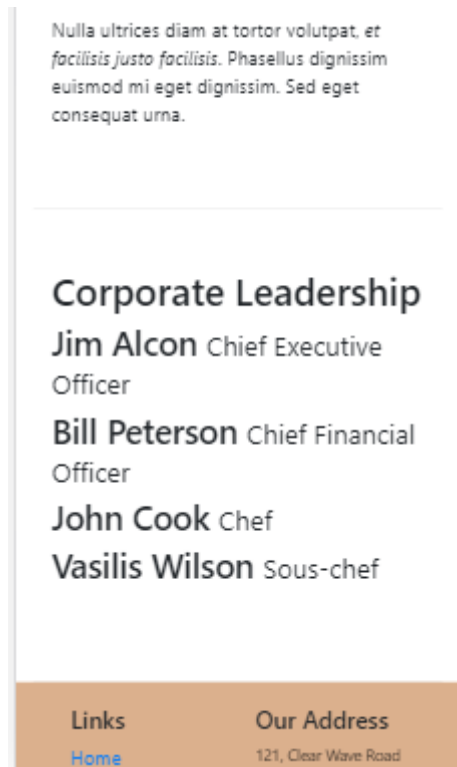

Do a Git commit with the message "**Bootstrap Assignment 1 Task 2**"

### Task 3

In this task you will use some responsive [utilities provided by Bootstrap](#) to hide some of the content only for extra small screens. You will make use of responsive display classes for showing and hiding elements by device. You should apply these classes so that the detailed descriptions of the corporate leadership is **hidden only for extra small screens**.

In the **iphone** view of your **Chrome** you can see the result:

Please also apply the same\* classes to the descriptions in the index.html page.

Do a Git commit with the message "**Bootstrap Assignment 1 Task 3**"

### Git -Github

Repeat the [steps](#) to upload the Git-Repository **leChocolat** to your account in **Github**.

Copy in a temp file the address of your Github repo. It must look like:

**"https://github.com/vasilispalilis/leChocolat"**

**To submit your work, you have to paste this address in the submission area and upload the aboutus.html file**
